2<sup>nd</sup> Response to Office Action of April 2, 2009

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

**Listing of Claims:** 

Claim 1 (previously presented): A rearview mirror assembly for a vehicle, the rearview

mirror assembly comprising:

a support structure for mounting the mirror assembly to the vehicle, the

support structure including a first part having a substantially permanent connection to

the vehicle and a second part;

the support structure further including a snap-in detent arrangement;

a snap-in spring element affixed to the support structure first part which

snaps into a corresponding recess in the support structure second part;

a support arm mounting at least one mirror, disposed on said first part of

the support structure and the second part of the support structure being disposed on the

support arm; and

a locking mechanism disposed on the support structure for selectively

locking together the first and second parts of the support structure for securing the

support arm and mirror to the vehicle, the locking mechanism including a key activated

mechanism including a key cylinder mounted on the first part of the support structure

and a rotatable latch member operatively connected to and rotatable via the key

cylinder for selectively lockingly engaging with the second part of the support structure.

Appl. No.: 10/053,830

Amdt. dated June 30, 2009

2<sup>nd</sup> Response to Office Action of April 2, 2009

Claims 2 (original): A rearview mirror assembly as in claim 1, further including an

adjustment mechanism attached to the support arm, the adjustment mechanism

configured to allow the support arm to be pivoted relative to the vehicle.

Claim 3 (original): A rearview mirror assembly as in claim 1, wherein the support

structure first part includes a clamp receptacle affixed to the vehicle, and the support

structure second part includes an insertable component inserted into the clamp

receptacle in an inserting direction, further including a slidably installed clamping wedge

on the insertable component, the wedge, upon pushing of the insertable component,

clampingly locking the insertable component and the clamping wedge to the clamp

receptacle.

Claim 4 (original): A rearview mirror assembly as in claim 3, wherein the clamping

wedge is slidable on the insertable component in a direction at right angles to the

inserting direction of the insertable component.

Claim 5 (original): A rearview mirror assembly as in claim 1, wherein the support

structure includes a snap-in detent apparatus.

Claim 6 (original): A rearview mirror assembly as in claim 5, wherein the snap-in

detent apparatus includes a snap-in spring element affixed to the support structure first

part and which snaps into a corresponding recess in the support structure second part.

Claims 7-10 (cancelled)

Claims 11 (original): A rearview mirror assembly as in claim 1, further including a cover

removably attachable to the support structure first part, removal of the cover exposing

the locking mechanism.

2<sup>nd</sup> Response to Office Action of April 2, 2009

Claims 12-14 (cancel)

Claim 15 (original): A rearview mirror assembly as in claim 11, wherein the support

structure first part includes a clamp receptacle affixed to the vehicle, and the support

structure second part includes an insertable component inserted into the clamp

receptacle in an inserting direction, further including a slidably installed clamping wedge

on the insertable component, the wedge, upon pushing of the insertable component,

clampingly locking the insertable component and the clamping wedge to the clamp

receptacle.

Claims 16-17 (cancel)

Claim 18 (previously presented): A rearview mirror assembly as in claim 1, further

including an adjustment mechanism attached to the support arm, the adjustment

mechanism configured to allow the support arm to be pivoted relative to the vehicle.

Claim 19 (previously presented): A rearview mirror assembly for a vehicle, the rearview

mirror assembly comprising:

a support structure for mounting the mirror assembly to the vehicle, the support

structure including a first part having a substantially permanent connection to the

vehicle and a second part;

the support structure first part includes a clamp receptacle affixed to the vehicle,

and the support structure second part includes an insertable component inserted into

the clamp receptacle in an inserting direction, further including a slidably installed

clamping wedge on the insertable component, the wedge, upon pushing of the

insertable component, clampingly locking the insertable component and the clamping

wedge to the clamp receptacle;

a support arm mounting at least one mirror, disposed on said first part of the

support structure and the second part of the support structure being disposed on the

support arm; and

a locking mechanism disposed on the support structure for selectively locking

together the first and second parts of the support structure for securing the support arm

and mirror to the vehicle, the locking mechanism including a key activated

mechanism including a key cylinder mounted on the first part of the support structure

and a rotatable latch member operatively connected to and rotatable via the key

cylinder for selectively lockingly engaging with the second part of the support structure.

Claim 20 (previously presented): A rearview mirror assembly as in claim 19, wherein

the clamping wedge is slidable on the insertable component in a direction at right angles

to the inserting direction of the insertable component.

Claim 23 (previously presented): A rearview mirror assembly as in claim 1, further

including a removable cover attachable to the support structure first part for covering the

locking mechanism.

Claim 24 (previously presented ): A rearview mirror assembly as in claim 1, further

including a removable cover attachable to the support structure first part, said cover

covering the locking mechanism and the snap-in spring element.

Claim 25 (previously presented): A rearview mirror assembly as in claim 1, wherein the

latch member is hook-shaped.
